# SOCCER systems *made to win*

## The people's sport

**Already at the beginning of the last century, 'the dribbling game' with the sole rule of stopping the ball by hand and then moving it forward with the foot, was played all over England on lawns, sandy surfaces, or just on the street. It doesn't need further explanation that in these days, the game of soccer was a rough game with many injuries.**

Nowadays the sport itself as well as the soccer surfaces have improved strongly. Artificial turf for football has gone through a real revolution since the 1960s. At first mainly was looked at the practical advantages of artificial turf compared to natural grass. Nowadays optimal playing characteristics in all weather conditions, preventing injuries and making players better are the most important principles of a soccer field.

## Edel Flashblade

*Sand – SBR-filled  
Built on lava stone sub-base*

# Edel Flashblade Performance-filled

**AFFORDABLE PERFORMER FOR MULTI-USE & INTENSIVE PLAY**

Our Flashblade yarn fulfills the needs when a competitive soccer field system according to FIFA standards is required. With its 12.000 Dtex and matt finishing, Edel Flashblade perfectly covers performance infill and gives the field an outstanding natural look. Due to its flash-shaped yarn, the piles stay upright when played intensively.

# 'INFILL-FREE' systems made to win

## Skip the hassle Just play

### excellence

- Lower maintenance costs**
- No granulate performance infill**
- Minimal cleaning efforts**
- No static electricity**
- Perfect draining capacities**

**An infill-free grass system offers a fair amount of all the playing characteristics found in performance-filled systems. They however come with a big advantage, which is the lack of performance infill such as SBR, TPE, EPDM and/or cork.**

Not having to fill the system with granulate, only occasionally with stabilizing sand, leads to fast and affordable installing possibilities. Logically this also leads to a deduction of maintaining costs worth mentioning.
